

Week-07

Interfaces

231901029
Madhesh M A

Program 1:

```
import java.util.Scanner;

interface Sports {
    void setHomeTeam(String name);
    void setVisitingTeam(String name);
}

interface Football extends Sports {
    void homeTeamScored(int points);
    void visitingTeamScored(int points);
}

class College implements Football {
    private String homeTeam;
    private String visitingTeam;
    private int homeTeamPoints = 0;
    private int visitingTeamPoints = 0;

    public void setHomeTeam(String name) {
        this.homeTeam = name;
    }

    public void setVisitingTeam(String name) {
        this.visitingTeam = name;
    }

    public void homeTeamScored(int points) {
        homeTeamPoints += points;
        System.out.println(homeTeam + " " + points + " scored");
    }
}
```

```

public void visitingTeamScored(int points) {
    visitingTeamPoints += points;
    System.out.println(visitingTeam + " " + points + " scored");
}

public void winningTeam() {
    if (homeTeamPoints > visitingTeamPoints) {
        System.out.println(homeTeam + " is the winner!");
    } else if (homeTeamPoints < visitingTeamPoints) {
        System.out.println(visitingTeam + " is the winner!");
    } else {
        System.out.println("It's a tie match.");
    }
}
}

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        // Get home team name
        String hname = sc.nextLine();

        // Get visiting team name
        String vteam = sc.nextLine();

        // Create College object
        College match = new College();
        match.setHomeTeam(hname);
        match.setVisitingTeam(vteam);

        // Get points scored by home team
        int htpoints = sc.nextInt();
        match.homeTeamScored(htpoints);

        // Get points scored by visiting team
        int vtpoints = sc.nextInt();
        match.visitingTeamScored(vtpoints);

        // Determine and print the winning team
        match.winningTeam();

        sc.close();
    }
}

```

```
}
```

Program 2:

```
// Define the RBI interface
```

```
interface RBI {
```

```
    // Variable declaration
```

```
    String parentBank = "RBI";
```

```
    // Abstract method
```

```
    double rateOfInterest();
```

```
    // Default method
```

```
    default void policyNote() {
```

```
        System.out.println("RBI has a new Policy issued in 2023");
```

```
    }
```

```
    // Static method
```

```
    static void regulations() {
```

```
        System.out.println("RBI has updated new regulations in 2024.");
```

```
    }
```

```
}
```

```
// SBI class implementing RBI interface
```

```
class SBI implements RBI {
```

```
    // Implementing the abstract method
```

```
    public double rateOfInterest() {
```

```
        return 7.6;
```

```
    }
```

```
}
```

```

// Karur class implementing RBI interface
class Karur implements RBI {
    // Implementing the abstract method
    public double rateOfInterest() {
        return 7.4;
    }
}

// Main class to test the functionality
public class Main {
    public static void main(String[] args) {
        // RBI policies and regulations
        RBI rbi = new SBI(); // Can be any class implementing RBI
        rbi.policyNote();    // Default method
        RBI.regulations();   // Static method

        // SBI bank details
        SBI sbi = new SBI();
        System.out.println("SBI rate of interest: " + sbi.rateOfInterest() + " per
annum.");

        // Karur bank details
        Karur karur = new Karur();
        System.out.println("Karur rate of interest: " + karur.rateOfInterest() + " per
annum.");
    }
}

```

Program 3:

```
import java.util.Scanner;
```

```

// Define the Playable interface
interface Playable {
    // Abstract method to play the respective sport
    void play();
}

// Football class implementing Playable interface
class Football implements Playable {
    String name;

    // Constructor
    public Football(String name) {
        this.name = name;
    }

    // Override the play method
    public void play() {
        System.out.println(name + " is Playing football");
    }
}

// Volleyball class implementing Playable interface
class Volleyball implements Playable {
    String name;

    // Constructor
    public Volleyball(String name) {
        this.name = name;
    }

    // Override the play method
    public void play() {
        System.out.println(name + " is Playing volleyball");
    }
}

// Basketball class implementing Playable interface
class Basketball implements Playable {
    String name;

    // Constructor

```

```

public Basketball(String name) {
    this.name = name;
}

// Override the play method
public void play() {
    System.out.println(name + " is Playing basketball");
}
}

// Main class to test the functionality
public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        // Input for Football player

        String footballPlayerName = scanner.nextLine();
        Football footballPlayer = new Football(footballPlayerName);

        // Input for Volleyball player

        String volleyballPlayerName = scanner.nextLine();
        Volleyball volleyballPlayer = new Volleyball(volleyballPlayerName);

        // Input for Basketball player

        String basketballPlayerName = scanner.nextLine();
        Basketball basketballPlayer = new Basketball(basketballPlayerName);

        // Call the play method for each player
        footballPlayer.play();
        volleyballPlayer.play();
        basketballPlayer.play();

        scanner.close();
    }
}

```
